

## INEXPENSIVE CABLE PALLET STOP

### ABSTRACT OF THE DISCLOSURE

5           A material shelving comprises a basic shelving unit  
with vertical frame supports inter-tied with lateral load  
beams. At the rear of each shelf, between each pair of  
vertical frame supports, a backing cable is strung  
between two offset brackets just above the lateral load  
10 beams. Any pallets and material on pallets placed on the  
load beams of the shelving will be stopped from being  
pushed through by the backing cable.
